

**AMENDMENTS TO THE ABSTRACT**

Please substitute the following paragraph for the abstract now appearing in the currently filed specification:

A transceiver cage to accommodate a transceiver module. The transceiver cage includes a housing having a top plate, a bottom plate, a back plate, a first side plate, and a second side plate. There is an opening at a front of the housing for the insertion of the transceiver module. The transceiver cage further includes at least one resilience piece protruding from an inner wall of the housing toward the front and a latch holding the transceiver module accommodated in the housing against a force of the resilience piece. The transceiver module is detachably accommodated in the transceiver cage by locking and releasing the latch. The resilience piece includes a first bend section having a proximal end for joining the housing and the resilience piece, a second bend section having a protruding end, and at least one intermediate bend section provided between the first bend section and the second bend section.
